Summary

Full-stack software engineer (B.E. CS, 2026) specializing in MERN stack, REST APIs, and GenAI SaaS platforms. Built two production-grade applications covering multi-tenancy, RAG pipelines, asynchronous processing, and CI/CD. Focused on delivering secure, scalable, and performance-optimized code in collaborative teams.

Projects

NexoraSpace — Multi-Tenant GenAI SaaS Platform 🔗 NexoraSpace

- Designed a multi-tenant SaaS architecture with isolated tenant data and token-based authentication.
- Integrated a Retrieval-Augmented Generation (RAG) pipeline using Gemini AI to deliver real-time, context-aware insights.
- Optimized MongoDB schema design and query indexing, cutting average response time by ~30%.
- Built GitHub Actions CI/CD workflows for automated testing and deployment, eliminating manual release friction.

Employee Management System 🔗 Employee Management System

- Architected a role-based multi-portal system (Admin/Employee) to streamline attendance, leave, and workforce records.
- Engineered an automated payroll pipeline that calculates monthly salaries and renders downloadable PDF payslips.
- Integrated Inngest for asynchronous background jobs and scheduled workflows, decoupling heavy tasks from the main thread.
- Designed responsive, real-time dashboards with Tailwind CSS for live tracking of attendance and payroll data.
